

KMAP GENERAL BULLETIN 17252

Provider Enrollment Changes

Kansas Medical Assistance Program (KMAP) is changing its provider enrollment practices to align with Medicare practices and industry standards beginning in 2018. These changes will impact some groups.

Currently, a group enrolling in KMAP completes one application for the group and attaches the group members based on the individual's enrollment with the same Tax Identification Number (TIN) and physical service location within the same state. The service location for claims submitted is assigned by the service location of the group member performing the services.

What is changing?

For group practices, each physical service location will need to be enrolled with KMAP. A service location is defined as a physical location or street address where services are performed. This includes satellite offices.

KMAP will help providers with the changes.

Beginning November 2017, KMAP is using current data from the Medicaid Management Information System (MMIS) to identify impacted providers. Once impacted groups are identified, representatives from KMAP will work with the providers to review and finalize new group service locations and assign new KMAP identification (ID) numbers based on the new provider enrollment standards. Once the new groups have been established, the impacted providers will receive a confirmation letter with the newly assigned provider information, along with revised billing instructions.

Do providers need to do anything?

No. The conversion will be completed by the KMAP Provider Enrollment team. However, representatives may contact providers to validate the information that is on file.

Where can providers get more information?

Providers can contact KMAP Provider Enrollment and Customer Service at 1-800-933-6593 with any questions regarding these changes or for assistance with changes that need to be made to existing provider records.
