Environmental Scan Survey

The Kansas Department for Health and Environment (KDHE) has commissioned an Environmental Scan survey. The purpose of the survey is to obtain information from external sources that will allow for a greater understanding of the current healthcare technology landscape and health care delivery. The information gathered will be used to establish a baseline, assist in planning for future needs, and to obtain federal funds for those needs.

The Environmental Scan survey is available online here, and in paper format. Paper copies can be requested by emailing KansasEnvironmentalScan@healthtechsolutions.com. Our vendor, HealthTech Solutions, will generate email and FAX communications.

The survey should be completed by staff with knowledge of the provider’s internet access, health record storage, health information exchange participation, and other health technologies used by provider. The survey should take no longer than 15 minutes and must be completed in one sitting, as answers cannot be saved for later submission.

KDHE encourages participation, as this information is critical for future planning. Knowledge of existing technologies and identification of gaps is key to our success and allows for the creation of plans, tools, and technologies that benefit the citizens of Kansas and the Kansas provider community.

KDHE is asking for the Environmental Scan survey to be completed by April 3, 2020.

If you have any questions regarding the survey, please contact KansasEnvironmentalScan@healthtechsolutions.com.
